Summary

Software Engineer with 4+ years of experience in scalable systems, cloud infrastructure, and DevOps, currently pursuing M.S. in Computer Science. Experienced in building scalable systems and applying deep learning techniques for generative modeling and computer vision. Skilled in automating ML pipelines and deploying production-ready AI solutions.

Professional Experience

Software Engineer | Tata Consultancy Services

Nov 2020 – Jan 2025

Mumbai, India

- Led the migration of legacy on-prem banking systems to AWS, improving scalability, achieving 99.9% uptime, and reducing infrastructure costs by 25% while ensuring compliance with security and regulatory standards.
- Engineered and optimized cloud infrastructure and CI/CD pipelines, reducing deployment time by 40% and increasing release frequency from weekly to daily builds.
- Drove incident response and resolution, handling 50+ production incidents/month and reducing MTTR by 30% through root cause analysis and cross-team coordination.

Intern | Tata Consultancy Services

Jan 2020 – Jul 2020

Nagpur, India

- Designed and developed RESTful APIs for an employee management system, and improving data retrieval efficiency by 35%.
- Built backend services using Java, Spring Framework, Maven, and Tomcat to enable CRUD operations and streamline workflows, reducing manual data handling effort by 40%.

Education

Master of Science in Computer Science

Jan 2025 – Present

California State University, Long Beach

GPA: 3.667

Bachelor of Engineering in Computer Science

Aug 2016 – Jun 2020

Gyan Ganga Institute of Technology & Sciences

CGPA: 3.49

Projects

Deep Learning with PyTorch: GANs – hands-on model implementations

Sept 2025 – Jan 2026

- Designed and trained deep learning models, generating 10K+ synthetic images and improving output quality (20% FID reduction) through iterative experimentation and evaluation.
- Developed GAN-based pipelines with stability techniques and hyperparameter tuning, reducing training instability by 30% and improving convergence speed by 25%, while producing visually consistent outputs across applications such as car design and handwritten image generation.
- Published reproducible experiments and training pipelines on GitHub, enabling 100% reproducibility and reuse across multiple model configurations: Zero-to-GANS | CAR-GANS

Medicine Reseller (Major Project)

Jan 2019 – Mar 2020

- Developed a mobile application enabling users to buy and sell unused medicines at discounted prices.
- Implemented user listing, search, and transaction workflows with a backend service for data management.

Tech: Android, Java, Apache Tomcat, HTML, PHP.

Student Management System (Training Project)

Jun 2019

- Built a web-based system to manage student records, including data entry, updates, and retrieval.
- Designed basic UI and backend logic to support administrative operations.

Tech: Apache Tomcat, HTML, CSS, PHP.

Trade Margin App (Smart India Hackathon)

Feb 2018 – Mar 2018

- Developed an Android application to identify businesses using GSTN-related data and collect product details.
- Automated trade margin calculation and delivered generated receipts via SMS and email notifications.

Tech: Android, Java, Apache Tomcat, HTML, PHP.

Technical Skills

Programming Languages: Python, Java, JavaScript, C++, C#, PHP

Machine Learning: PyTorch, CNNs, GANs, ResNet, NumPy, Matplotlib, CUDA

Cloud & DevOps: AWS (EC2, S3, IAM, Lambda, RDS, DynamoDB, API Gateway, CloudFormation, CloudWatch), Docker, Terraform, Ansible, CI/CD (GitHub Actions, Jenkins, AWS CodePipeline)

Databases: PostgreSQL, DynamoDB, Oracle, SQL

Tools: Git, GitHub, Jira, ServiceNow, Bitbucket, TeamDynamix

Training and Certifications

Cisco Networking Academy: Cybersecurity, CCNA, IoT

Jan 2018

TCS-ION Digital Learning Hub: Core Java (34 hours)

Jan 2018

Ozone-soft Solutions: LAMP (Linux, Apache, MySQL, PHP) training (1 week)

Jun 2019
